WALEED AHMED

w29ahmed@edu.uwaterloo.ca | 647-708-7272 | linkedin.com/in/waleed-a | github.com/w29ahmed

SKILLS

C++ | C# | Python | Java | MATLAB | JavaScript | HTML/CSS

OpenCV | ROS | .NET | TensorFlow | Git | Bash | Arduino

EXPERIENCE

Video Software Developer

Synaptive Medical

Sep 2018 – Dec 2018 | Toronto, ON

- Reverse engineered third party camera color settings to improve visibility of biological tissue during surgical procedures
- Used **C#** for design and integration of image processing algorithms with existing software architecture in a Windows environment
- Post-processed image data in **Python** using data libraries such as **Pandas**, **Numpy**, and **Matplotlib** to analyze colour manipulation
- Utilized **OpenCV** in **C++** to model and apply colour transformations
- Created a Windows desktop application using the **.NET** framework to serve as a front-end interface for a serial communication protocol that allowed reading/writing of camera settings
- Built a web interface using **JavaScript**, **HTML**, and **CSS** for convenient and intuitive usage of a colour manipulation algorithm

Industrial Imaging Software Developer

P&P Optica

Jan 2018 – Apr 2018 | Waterloo, ON

- Developed software for industrial imaging applications on **Linux** machines with **Git** version control in an **Agile** environment
- Implemented image correction algorithms and post-processing for industrial cameras in **Python** using **Numpy**, **OpenCV**, and **Matplotlib**
- Refactored data handling modules for efficient file input/output and wrote unit tests for them in **Python** using **Pytest**
- Restructured camera control modules in **C/C++** that use the **Camera Link** serial protocol to interface with the camera for control purposes
- Documented software design decisions and a troubleshooting guide to efficiently debug issues pertaining to image acquisition

ACTIVITIES

Software Team Lead

UW Robotics

Apr 2018 – Present

- Leading software team for a mobile racing robot set to compete in the **International Autonomous Robot Racing Competition**
- Developed software architecture using a **Linux** based framework; **ROS** (Robot Operating System), for efficient package management and communication between **computer vision** modules in **C++**
- Used **CUDA**, NVIDIA's parallel computing platform for GPU optimization of **OpenCV** code in **C++** for lane and object detection

PROJECTS

CropIT (Hack Western 5)

github.com/w29ahmed/CropIT-Android

- Android app that classifies agricultural crops as healthy or unhealthy built using **Java** and **Android Studio**
- Trained a **convolutional neural network (CNN)** in **Python** using **TensorFlow/Keras**

Toronto Raptors Image Classifier

github.com/w29ahmed/toronto-raptors-classifier

- Utilized transfer learning on Google's Inception v3 image classifier to identify basketball players using **TensorFlow**

Arduino Jukebox

github.com/w29ahmed/Arduino-JukeBox

- Programmed in **C++** to cycle through and play songs displayed on a LCD screen
- Songs are hard coded frequency patterns digitally sent to a piezoelectric speaker

Android Notes App

github.com/w29ahmed/Notes_App

- Simple but efficient note taking app for Android API levels 15 and above constructed using **Java**, **XML**, and a **SQLite Database**

EDUCATION

B.ASc Computer Engineering

University of Waterloo

2022

Online Coursework

- Stanford University: Machine Learning with **MATLAB** by Andrew Ng
- Machine Learning A-Z: Hands-On **Python** & R In Data Science

INTERESTS

Computer Vision | Image Processing | Machine Learning | Gym | Reading | Basketball | Toronto Raptors
